# JetTrac Field Inspection for UST/AST

JetTrac Field Inspection for UST/AST is a state-of-the-art mobile data capture and compliance solution designed specifically for use by environmental services companies that do compliance inspections for the regulated tank community.

JetTrac Field Inspection for UST/AST will transform your field and site inspection processes, reduce errors and cycle times, and improve the availability of critical data for compliance, reporting, and analysis.

The solution has two separate modules:

- Mobile data capture module that allows your field technicians to quickly and accurately complete inspection forms and work orders, even when they don't have an online connection.

- Web-based Compliance Reporting System that enables an automated workflow and approval processes for your inspections and includes cloud-based easy-to use portal that allows your customers online access to their documents including permits, testing schedules, Testing Reports and Results, SIR Reports, Certificates of Compliance, Employee Training Results, Site photos, and site diagrams/blueprints.

Capabilities:

- Pre-fills and automatically sends testing/inspection forms and the work order with customer, facility, and other pertinent information to make the process of completing the forms faster and more accurate with fewer errors.

- The ability for your field technicians to easily complete testing/inspection forms and work orders in the field on a tablet. Easily include customer electronic signatures, photos right into the forms.

- Automatically validates that your field technician has the proper certification and training to perform the required test or inspection prior to dispatching the technician.

- Automatically pre-fills and creates the following documents/links for each inspection.

    o Link to add the appointment to a Google or Outlook Calendar

    o Link with Directions to the nearest Hospital Emergency Room

    o The correct Pre-filled testing and inspection documents including documents like the SB-989, Monitor Certifications, Work Order etc.

- Includes a workflow and approval process for inspections. Once the inspection is approved by a supervisor or manager, a final document package including a cover letter is automatically created, archived, and can be emailed to your customer.

- Training Record - Tracks training courses completed, expiration dates, notifies recipient and manager of expiring training.

The optional Web-based Compliance Reporting System is a cloud-based workflow and document storage solution that manages your overall workflow and approval processes, emails inspections automatically, stores all of your inspection documents as PDF's electronically, and even has dashboards and reporting that allows you to better manage your business.

Features include:

Any Device: JetTrac Field Inspection works with the devices you want to use; iPads, Android tablets, and Microsoft Windows devices, PCs, Virtual & On-premise Servers, laptops, Workstations.

Online and offline: Unlike Web-only solutions, JetTrac Field Inspection works in remote field situations when a hot-spot is not available.

Workflow & Audit Trails: An enterprise-class administrative server for central management of users, forms & data flows, version control, audit trails and routing workflows.

"We looked at 2 other vendors but they were not close to what ProTechnology offered in terms of functionality.... the sales team was very knowledgeable and the product was simply the best available".

- IT Manager, Environmental Company

Touch Friendly: Mobile friendly checkboxes, drop down lists, required fields, validation, calculations, and text field customization (dates, masks, validation) to make collection easy and reduce mistakes.

Speech Recognition & Capture: Hands-free e-Forms, speak naturally and voice recognition & capture will fill in the fields for you.

Handwriting Interpretation: Write with a digital pen or your fingertip, and JetTrac Field Inspection can interpret your handwriting. An easy way to collect signatures and field notes.

Photo Capture, Signatures and Inking: Add photos with mark-up and notes, customer and field technician signatures. JetTrac Field Inspection will eliminate the need to print your documents to capture signatures.

Your Business Rules: Business rules may be added to a form to enforce quality data collection. Such rules avoid missing data, flag potential errors or submission of bad data vastly boosting accuracy.

Intelligent Feedback: The forms can specify real-time feedback during data collection. The feedback may occur when data is entered, calculations are performed or when business rules are violated.

Flexible integrations: Send data directly to your line of business applications, databases, accounting accrual systems, document management systems and more — using web-services, flat-file exchange, APIs, SDKs and many other methods.

"Every field inspection company has forms that capture data that is critical to their business and customers. All field inspection companies would like to make their forms do what ProTechnology JetTrac Mobile data capture solutions can do. They have many years of experience and an in-depth knowledge of mobile data capture and electronic forms. We would highly recommend partnering with ProTechnology for any mobile data capture solution."
